

HARISH VARDHAN

Computer Science Engineering Student | Aspiring Software Engineer Intern

Dindigul, Tamil Nadu, India | +91 9541154865 | harishvardhanm24cs@psnacet.edu.in | linkedin.com/in/harshvardhan2005 | github.com/harishvardhanm24cs-glitch

OBJECTIVE

Computer Science undergraduate with hands-on experience in Python, C, C++, Java, and the MERN stack, seeking a Software Engineering internship at *[Infosys]* to apply strong fundamentals in data structure algorithms, and full-stack development to build reliable, scalable products. Proven ability to take AI-driven projects from concept to working prototype, with a strong interest in collaborative, fast-paced engineering teams.

EDUCATION

B.E. Computer Science and Engineering

Expected Graduation: 2028

PSNA College of Engineering and Technology, Dindigul, Tamil Nadu

PROJECTS

RM Monitor — AI-Powered Raw Material & Warehouse Management System [Completed]

2025 – Present

- Developed a full-stack warehouse management system for tracking raw materials in a manufacturing environment.
- Implemented QR code generation and scanning to automate inward and outward material movements.
- Built a Digital Twin warehouse view for real-time monitoring of racks, material locations, and inventory status.
- Automated inventory updates, transaction tracking, and low-stock threshold alerts to reduce manual effort and errors.
- Designed role-based access control and secure APIs for warehouse operators and managers.
- Integrated inventory analytics, audit logs, and warehouse insights to improve material traceability and decision-making.
- Developed and tested end-to-end workflows for inventory management, warehouse operations, and material tracking.
- **Tech Stack:** React.js, TypeScript, Node.js, Express.js, MySQL, REST APIs, JWT Authentication, Tailwind CSS, QR Code Technology, GitHub, Postman.

NeuroSense AI — Clinical Diagnostic & Behavioral Analysis Platform [In process]

2026 – Present

- Developed an AI-powered platform to identify early behavioral indicators associated with learning difficulties such as dyslexia and ADHD through multimodal assessment techniques.
- Designed and integrated modules for reading analysis, speech evaluation, typing behavior tracking, handwriting assessment, emotion recognition, and attention monitoring to create a comprehensive cognitive profile.
- Built a centralized behavioral intelligence pipeline that collects, synchronizes, and processes data from multiple assessment modules to generate meaningful insights and performance metrics
- Implemented machine learning-based cognitive scoring algorithms to calculate attention stability, learning engagement, cognitive fatigue, and behavioral risk indicators.
- Developed role-based dashboards for children, parents, and teachers, enabling personalized assessments, progress tracking, assignment management, and automated report generation.
- Created a session management and reporting system that stores assessment results, generates detailed cognitive reports, and provides personalized intervention recommendations.
- Designed a scalable full-stack architecture with API-driven communication, database integration, authentication, and real-time analytics to support future deployment in schools and educational institutions.
- **Tech Stack:** React.js, Next.js, Tailwind CSS, FastAPI, Python, SQLite, SQLAlchemy, Scikit-learn, OpenCV, MediaPipe, DeepFace, Whisper AI, NumPy, Pandas, Android Studio, Antigravity Platform, Git, GitHub, Postman, REST APIs, Session Management, Report Generation, Cognitive Scoring Engine

AI Powered Digital Twin Of The India's Climate using India's National Data [ISRO Problem Statement]

- Developing an AI-powered Digital Twin to create a virtual representation of India's climate system.
- Integrating IMD weather data and INSAT satellite observations for climate monitoring and analysis.
- Building deep learning models to predict short-term rainfall and temperature patterns.
- Generating high-resolution climate insights for a selected pilot region.
- Implementing a "what-if" simulation engine to assess climate change impacts under different scenarios.
- Creating an interactive geospatial dashboard for real-time visualization and decision support.

- Designing a scalable framework that can be extended for nationwide climate intelligence applications.
- **Tech Stack:** Python, PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy, GeoPandas, Rasterio, Xarray, FastAPI, React.js, Tailwind CSS, Plotly, Leaflet, Mapbox, PostgreSQL, PostGIS, Git, GitHub, Docker.

TECHNICAL SKILLS

Languages: Python, C, C++, Java, JavaScript

Web Development: HTML, CSS, React.js, Node.js, Express.js, MongoDB (MERN Stack)

CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Tools & Platforms: Git, GitHub, VS Code, Postman

ACHIEVEMENTS & LEADERSHIP

- **1st Prize, TECHDAY'26 Ideathon** — organized by the ISTE Student Chapter, SRM Madurai College of Engineering and Technology (Feb 2026).
- **Pitch Festival 2026 Participant** — selected among top student startup ideas at PSNA Technology Foundation's flagship ideation event (Apr 2026) [[@T-HUB](#)]
